# Vishwas Rudramurthy

Bengaluru, India | vishwasrudramurthy.26@gmail.com | linkedin.com/in/vr26 | github.com/vrlegacy | buildwithvr.pages.dev

## Summary

Passionate FullStack and AI developer with strong expertise in Python, FastAPI, React, Next.js, and AI workflow automation. Specializing in building end-to-end web platforms, orchestrating multi-agent LLM workflows (n8n, Gemini, Ollama/Gemma), and delivering clean, maintainable backend architectures with high computational efficiency.

## Technical Skills

**Languages:** Python, JavaScript, TypeScript, SQL, HTML5/CSS3

**Backend:** FastAPI, REST APIs, Node.js, Express.js, OAuth2/JWT Auth, RBAC, SQLAlchemy

**Databases:** PostgreSQL, MongoDB Atlas, SQLite, Supabase

**AI & Automation:** Google Gemini API, Ollama / Gemma, n8n Workflows, LiveKit WebRTC, Sarvam AI, OCR Processing, LangChain, Natural NLP

**Frontend:** React.js, Next.js, TypeScript, Tailwind CSS, Radix UI, Redux, Vite

**Tools & Cloud:** Git, GitHub, Docker, Supabase, AWS, Cloudinary, Postman, Linux

## Experience

**Full Stack Developer Intern** Apr 2026 – Present

*Sirpi Products and Services Pvt. Ltd.* *Bengaluru, India*

- Architecting scalable REST APIs and asynchronous backend microservices using Python and FastAPI.
- Developing interactive React user interface components with TypeScript and Tailwind CSS.
- Optimizing database queries, caching strategies, and third-party service integration pipelines.

**Full Stack Intern** Aug 2025 – Dec 2025

*Infosys Springboard* *Remote*

- Led a team of 6 developers in architecting and delivering Civix, a digital civic engagement web platform.
- Designed secure Node.js/Express REST backend with JWT authentication and pending user authorization queues.
- Integrated OpenStreetMap geolocation API, Cloudinary media pipelines, and Natural NLP sentiment analysis.
- Managed GitHub team branching strategies, sprint task allocation, and daily code reviews.

## Projects

**TalentPulse AI | Real-Time Voice Interview Platform** GitHub

*FastAPI, React, LiveKit, Sarvam AI, n8n, Supabase, Python*

- Built live voice interview room using LiveKit Agents and Sarvam AI voice synthesis over WebRTC.
- Implemented conversation state management to sequence questions, retain context, and handle session reconnections.
- Automated resume-based question generation, candidate email workflows, and LLM transcript scoring via n8n.
- Engineered asynchronous FastAPI outbox worker to guarantee reliable event delivery during network interruptions.
- Created recruiter analytics dashboard displaying candidate rankings, transcribed audio, and readiness reports.

**TriGo Trip Planner | Conversational AI Travel Assistant** GitHub | Live

*n8n, Google Gemini, Gemma, OpenTripMap, OpenRouteService, TypeScript, REST API*

- Constructed multi-step n8n automation workflows connecting Google Gemini and Gemma models.
- Integrated OpenTripMap for point-of-interest discovery and OpenRouteService for distance/duration calculations.
- Designed structured JSON itinerary engine generating multi-day travel timelines and budget estimates.
- Built interactive conversational React frontend interface featuring multi-turn chat session memory.
- Implemented API failover handlers and rate-limiting fallbacks across external geospatial and AI endpoints.

**Civix | Digital Civic Engagement Platform** GitHub | Live

*React.js, TypeScript, Tailwind CSS, Node.js, Express.js, MongoDB, Cloudinary, OpenStreetMap, Natural NLP*

- Led team of 6 developers in architecting digital civic engagement platform bridging citizens and authorities.
- Designed Express.js & MongoDB REST API with JWT authentication, request validation, and role-based access.
- Integrated OpenStreetMap geolocation API for location tagging and Cloudinary for media storage.
- Implemented digital petitions, polls, and Natural NLP sentiment analysis on citizen feedback.
- Configured automated deployment workflows and continuous integration test suites.

**FinOCR | Financial OCR & Spend Analytics** GitHub | Live

*Python, FastAPI, Gemma (Ollama), Gemini API, Auth0, Supabase, React.js, TypeScript, Vite*

- Engineered FastAPI REST backend and React/Vite spend analytics dashboard with Supabase cloud storage.
- Integrated local Gemma models on Ollama alongside Gemini API for structured receipt text extraction.
- Designed PostgreSQL tables with SQLAlchemy relationships and cascading constraints for data integrity.
- Implemented Auth0 authentication, transaction auditing workflows, and spending analytics visualizations.
- Developed custom image contrast preprocessing routines to maximize OCR accuracy on low-quality receipts.

**GitHub Repo Explainer | AI Codebase Summarizer** GitHub

*Python, FastAPI, Gemini API, GitHub REST API, React.js, TypeScript, Tailwind CSS*

- Developed automated codebase documentation tool parsing public and private GitHub repositories via GitHub REST API.
- Engineered token-aware code chunking pipeline in Python and FastAPI to format source files for LLM context limits.
- Integrated Google Gemini API to generate structured architectural overviews, API breakdowns, and file summaries.
- Built interactive React & Tailwind CSS frontend allowing developers to navigate codebase trees with AI insights.
- Implemented background async caching for parsed repository trees to optimize repeated AI requests.

**Candidate Readiness Workflow | AI Resume Fit Analyzer** GitHub

*n8n, Python, FastAPI, Tesseract OCR, Gemini API, Supabase*

- Constructed automated document processing pipeline parsing uploaded PDF resumes using OCR extraction.
- Integrated Gemini LLM scoring models to calculate candidate fit percentages against job descriptions.
- Automated interview question generation and missing skill recommendations via n8n workflows.
- Engineered Supabase cloud database schema to store candidate scorecards and recruiter evaluation histories.
- Designed responsive evaluation dashboard displaying visual fit metrics and recruiter summary reports.

**Diabetic Retinopathy Detection | Deep Learning Diagnostic** GitHub

*Python, Flask, Deep Learning, CNN, CLAHE, OpenCV, Pandas, NumPy*

- Developed deep learning diagnostic application automating severity grading of diabetic retinopathy from retinal fundus images.
- Built Convolutional Neural Network (CNN) architecture trained on fundus image datasets for multi-class classification.
- Applied CLAHE (Contrast Limited Adaptive Histogram Equalization) and OpenCV preprocessing to enhance microaneurysm visibility.
- Built lightweight Flask web application for medical professionals to upload fundus images and receive instant predictions.
- Evaluated model performance using ROC-AUC curves, confusion matrices, and cross-validation techniques.

## Leadership & Key Highlights

- **Infosys Springboard Project Lead:** Directed team of 6 engineers across 5 agile development sprints to ship Civix platform.
- **Open-Source Developer:** Architected 15+ automated n8n AI workflows and 25+ open-source repositories on GitHub.
- **Academic Academic Record:** Maintained 8.2/10 CGPA in B.E. Artificial Intelligence & Machine Learning at RRCE.

## Education

**Rajarajeshwari College of Engineering** Sept 2022 – June 2026

*B.E. in Artificial Intelligence and Machine Learning* ***CGPA: 8.2/10***
